Investment and maintenance plans on roads network

Based on its high-level expertise in GIS and Multicriteria analysis, beside strong knowledge in transport planning and road design, NET Engineering supports international Road Authorities in prioritizing intervention process and investment plans with the goal of upgrading the roads network. The investment plans are developed considering connectivity and bottleneck detection, land use with primary services (e.g., schools, hospitals) and factory sites.

Services

Transport planning:

- assessment of design options, cost-benefit analysis and multi criteria analysis
- developing of infrastructure investment plans

Competences

Transport modelling

GIS and territorial analysis

socio economic analysis

environmental analysis
