## Railway intermodal hubs

NET Engineering provides comprehensive project management in the integrated design of rail freight terminal, developing feasibility, detailed and construction projects with high-level competencies in the design of infrastructure, rolling stock and systems, as well as technical solutions to improve terminals operativity (e.g. installation of locomotive turntables, transtainer cranes, tankers loading positions), ensuring projects of the highest quality thanks to our expertise in BIM Management

### Services

#### PLANNING

- Terminal layout planning.

#### DESIGN

- Integrated design activities: track, civil works and equipment
- Expertise in different specialistic fields as environment and sustainability, railway and tunnel safety

#### OPERATION&MANTAINANCE

- Refurbishing of existing freight terminal
- Upgrading of existing railway terminal to introduce H2 fuelling stations.

### Competences

System engineering and integrated project design management

Track engineering

BIM modelling
