Urban roads and highway

NET Engineering provides comprehensive engineering expertise in the design of both urban roads and highways. We have high-level competencies in the design of roadway layouts, design of civil works connected with roads like bridges, viaducts, tunnels. From feasibility studies to planning, design, procurement, construction supervision, and post-construction assessments, engineering expertise is required to ensure optimal efficiency and safety, while minimizing costs and environmental impacts.

Services

PROGRAMMING:

- Engineering expertise to plan investment priorities.

PLANNING:

- BIM Management
- Public Consultation and Route Planning.

DESIGN:

- From feasibility to detailed design and construction support
- Expertise in different specialistic fields as environment and sustainability, tunnel safety, hydraulic, geotechnic and soil mechanic, structures

OPERATION&MANTAINANCE:

- Traffic management on construction sites
- Safety audits

Competences

Route and alignment planning

Pavement design

Long span bridge design

Acoustic and safety barrier design
