Transport Hubs

NET Engineering has been providing comprehensive project management in redevelopment projects of more than 70 Italian railway stations. The projects we developed concern both internal and external areas, focusing in urban or landscape context of each hub and dealing with the interferences that arose through a system approach, which involve a large integration among different disciplines: architecture, structures, systems, and transport.

Services

Urban design initiatives and urban renewal with a comprehensive approach: mobility design, urbanistic planning, architecture, structure, and systems

Intermodal hubs and Railway stations requalification and redevelopment

Competences

Renovation of railway stations

Design of LPT stops

Urban planning inclusion

Design of urban furnishings
