

ATENA S.p.A. HAS A QUALITY  
MANAGEMENT SYSTEM CERTIFIED BY  
RINA IN COMPLIANCE WITH  
ISO 9001

# MR. BIO WINE | LATISANA (UD) - ITALY

Mr.  
BIO

Mr.  
BIO

Sea and land meet  
in a building with  
**sophisticated lines**  
and **innovative**  
**materials.**

**Mr. Bio Wine**, with  
its key features of  
light contemplation  
and vineyard  
worship, stands out  
as a sanctuary of  
excellent wine in  
all its architectural  
brilliance.

## Mr. Bio Wine Latisana (UD) - Italy

**Metalceilings and coverings:**  
Atena S.p.A.

**Contractor:**  
Impresa Costruzioni Del Bianco S.r.l. (UD)

**Architects:**  
Mara Ragagnin, Flavia Da Ros

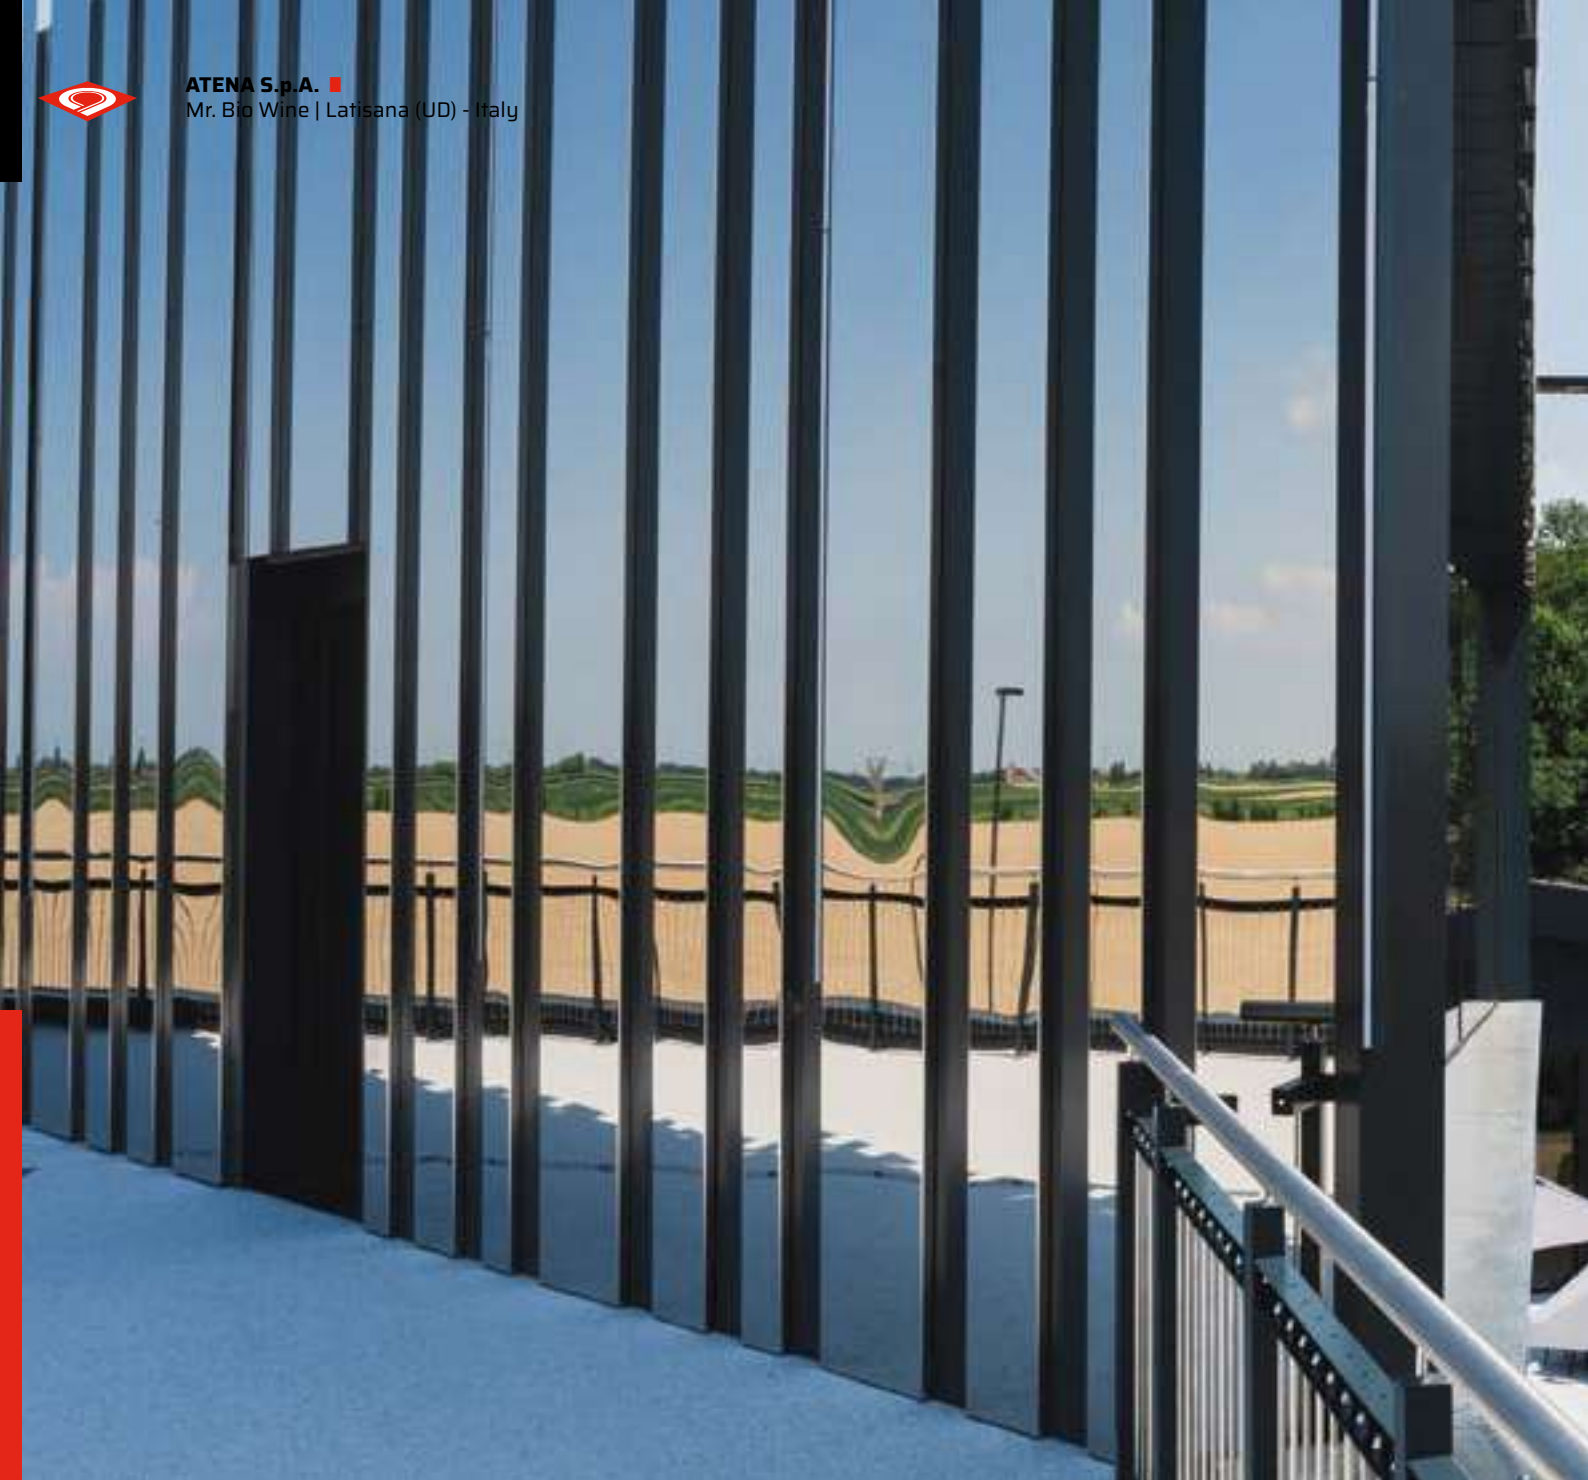

*[...] 'Its biological-technological nature has set its foundations in this structure: the pursuit of novel lines and materials that are ideally integrated with the territory.*

*The lines are essential as is our involvement in the vineyards. [...]*

Mr. Bio Wine construction is designed as an open-air location where people can meet and enjoy the sea-salty air mixed with the earth's smell.

To maximize corrosion resistance, **building's exterior** is produced in **polished 316 L steel**. The **Atena Formal system** used, alternates panels in three different widths to represent almost an extension of the structure towards the light conceived like the main factor in vine cultivation essential for grape development.

The vertical components, which have no joints, create an elegant **play of solids and voids** which is finished with a **mirror-effect surface** that allows light to be reflected an infinite number of times.

Mr Bio Wine's fundamental element is nature: large windows to let in light, ample spaces and a connection to the sea.

The outbuilding metal ceilings were created by alternating **matt black steel Atena Free Flow Baffle 30x100 mm** with **natural polished anodised aluminium**.

The mobility of the structure is thus accentuated by its own light. Ad hoc lighting solutions are also employed to create a visual continuum with a significant aesthetic impact.

The vineyards grow just 2 km from the coast, where land and sea form a harmonious whole, giving the wine a special flavour and aroma.

Conceived as the element from which everything springs, **vine** is the emblem of Mr. Bio Wine. So, **vine branches are digitally reproduced** along the bar covering made up of **faux-corten sheet**.

Corten colour is also used to **cover truncated pyramid-shaped tables** and the **wall behind the bar** to emphasize the importance of argil and fertile soil in good wines making.

The Corten sheet metal is an expression of **Atena's craftsmanship**.

Tables, built to welcome guests throughout their stay at the Wine Bar, have a purposefully rounded construction since the circle represents perfection, nature without limits, and a continual life-cycle.

The barrique cellar is the room where the wine is refined and aged in barriques.

The room's structure is revealed behind big glass panels, representing the facets of the winemaker's soul, his deepest inner being.

The sanctity of wood accompanies the discovery of the essences that make up the numerous bottles telling the story of excellent wines.

**Atena Formal Step system** in **corten steel color** runs the length of the space, connecting with the **inclined ceiling** to form a single body appearing like a precious shell that encloses and protects the barriques.

Corten steel was given a specific **passivation activation process** in laboratory. The effect is that of a time-marked environment, because it is the changing and passing of time that makes wine great. The structure is then finished by **recessed light beams** inserted in various heights in both the ceiling and the wall.

# MR. BIO WINE

Designed to combine nature and technology, Mr Bio Wine's structure is a good example of a **complete** and **integrated project** that demonstrates flexibility, skills and versatility of **Atena's** entirely **Made in Italy** production.
